

Test Plan

Scope:

- Registration
- Login
- Logout
- Project Management
- Task Management
- Search
- Filter
- Sort
- Dashboard
- Permission
- Validation
- Error Handling

Not in scope:

- Email notification
- Password reset, two-factor authentication
- File upload
- Mobile App
- Real-time update

(Reason: Because they're out of scope in the BRD.)

Test approach and types of testing applied:

- Functional Testing
- UI Testing
- Validation Testing
- Boundary Value Testing
- Positive Testing
- Negative Testing
- API Testing (Postman)

Test environment (browser, OS, tools): Windows 11 pro, Google Chrome, **Backend:** Node.js (Local Development Server), **API Testing Tool:** Postman

Entry criteria:

- SRS approved
- Application deployed
- Test accounts available

Exit criteria:

- All planned cases executed
- No Critical defects remain
- Test Summary prepared

Risks:

- Limited time may restrict exhaustive testing.
- Testing is primarily performed in Google Chrome, so browser-specific defects may not be detected.
- Environment or server instability may affect test execution.
- Performance, security, and compatibility testing are limited due to assignment scope.

Assumptions:

- Requirements are correct
- Seed data is consistent
- Test accounts function correctly
- Stable test environment
